ROCK GARD 505

Crack bridging protective coating for

PRODUCT DESCRIPTION USES

ROCK GARD 505 is a one component, plasto-elastic coating based on UV-curing acrylic dispersion with excellent crack-bridging properties even at temperatures below 0° C.

ROCK GARD 505 complies with the requirements of EN 1504-2 as protective coating.

ROCK GARD 505 is used for protection and enhancement of concrete structures (normal and lightweight concrete), especially exposed outdoor concrete surfaces with a risk of cracking ROCK GARD 505 is used with concrete repair works as an elastic protective coating on smoothing mortar (refer to your product / system data sheet), fibre cement and overcoating of existing soundly adhering coatings

- $\sqrt{\text{Suitable for protection against ingress (Principle 1, method 1.3 of EN 1504-9)},}$
- √ Suitable for moisture control (Principle 2, method 2.3 of EN 1504-9)
- $\sqrt{\text{Suitable for increasing the resistivity (Principle 8, method 8.3 of EN 1504-9)}$

CHARACTERISTICS / ADVANTAGES

- □ Crack-bridging even at low temperatures (-20°C)
- □ High diffusion resistance against CO₂ reducing the rate of carbonation
- □ Water vapour permeable
- Very good resistance against weathering and ageing
- Environmentally friendly (solvent free)
- □ Reduced tendency to dirt pick up and contamination

SYSTEM INFORMATION

| System Structure | | |
|----------------------------------------------|---------------------------------------|------------------------------------------------------------------------|
| System | Product (1) | Number of applications |
| Priming (2) | primer | 1 |
| Top coat(3) | ROCK GARD 505 | 2 – 3 |
| Note(1) Ple | ase refer to the respective data she | et for additional information. |
| Note(2) For very difficult substrate (very c | lense or weak with tensile strength < | < 1 N/mm ₂) and at low temperature, use solvent containing |

primer.

Note(3) In case of an intensive yellow or red colour shade and/or a dark substrate, more than two coats might be required. A third coat is also required in order to achieve the required thickness for full durability (crack bridging, adhesion after thermal cycling,

etc.)

APPLICATION DETAILS

SUBSTRATE PREPARATION

CONSUMPTION

Exposed concrete without existing coating: The surface must be dry, sound and free from loose and friable particles. Suitable preparation methods are steam cleaning, high pressure water jetting or blastcleaning.

New concrete must be at least 28 days old.

If required, a levelling pore sealer shall be applied - refer to the respective product data sheet. For cement based products, allow a curing time of at least 4 days before coating

Exposed concrete with existing coating:

Existing coatings must be tested to confirm their adhesion to the substrate and their suitability - adhesion test average > 0.8 N/mm2 with no single value below 0.5 N/mm₂.

For water based coating, use primer.

For solvent based coating, use primer.

In case of doubt, carry out adherence testing to determine which primer is most suitable - wait at least 2 weeks prior to conducting the adhesion test - an average value of 0.8 N/mm² is required with no single value below 0.5 N/mm².

APPLICATION CONDITIONS / LIMITATIONS

| Substrate Temperature | +8°C min. / +35°C max. | |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Ambient Temperature | +8°C min. / +35°C max. | |
| Relative Air Humidity Dew Point | < 80% Temperature must be at least 3°C above dew point. | |
| APPLICATION INSTRUCTIONS | | |
| Mixing Application Method / Tools | The materials are supplied ready for use. Stir thoroughly prior to application. Apply a Primer evenly onto the substrate. For use on very dense substrates up to 10% Thinner C may be added to Primer. ROCK GARD 505 can be applied by brush, roller or airless spray. | |
| Cleaning of Tools | Clean all tools and application equipment with clean water immediately after use. Hardened / cured material can only be removed mechanically. For Primer use Thinner. | |
| WAITING TIME / | | |

WAITING TIME **OVERCOATING**

Waiting time between coats at +20°C substrate temperature: Next coating Previous coating Waiting time ROCK GARD 505 8 hours min. ROCK GARD 505 Note: When application is on existing coatings, the waiting time for both primers will increase by 100%. Refresher coats of ROCK GARD 505 can be applied without priming if the existing coat has

been thoroughly cleaned.

CityChem.ne

NOTES ON **APPLICATION /** LIMITATIONS

Do not apply when there is:

- Expected rain
- Relative humidity > 80%
- Temperature below +8°C and/or below dew point

protected from rain for at least 4 hours at +20°C.

- Concrete younger than 28 days

The system is resistant to aggressive atmospheric influences.

ROCK GARD 505 does not require any special curing but must be
